	MODULE-VI PART-B
1.	Show that $a + a = a, \forall\ a \epsilon B$
2.	Show that $a.a = a, \forall\ a \epsilon B$
3.	Prove that the elements 0 and 1 of a Boolean algebra B are unique.
4.	If B is a Boolean algebra, then prove that $+1 = 1, \forall\ a \epsilon B$.
5.	If B is a Boolean algebra, then prove that $.0 = 0, \forall\ a \epsilon B$.
6.	In any Boolean algebra prove that $(a + b).(a' + c) = ac + a'b + bc$
7.	State Boundedness laws.
8.	In any Boolean algebra, for any $a, b \epsilon B$. Prove that $a + b' = 1$ if and only if $a + b = a$.
9.	Define Boolean algebra.
10.	State commutative laws in Boolean algebra.
11.	State associative laws in Boolean algebra.
12.	State distributive laws in Boolean algebra.
13.	State identity laws in Boolean algebra.
14.	State complement laws in Boolean algebra.
15.	In a Boolean algebra B, prove that $0' = 1$ and $1' = 0$.

MODULE-VI PART-C	
1.	In a Boolean algebra prove that the following statements are equivalent $(i) a + b = b$ $(ii) a.b = a$ $(iii) a' + b = 1$ $(iv) a.b' = 0$
2.	Prove the De Morgan's law $(a + b)' = a'.b', \forall\ a, b \epsilon B$
3.	In a Boolean algebra show that $ab' + a'b = 0$ if and only if $a = b$.
4.	Prove that $a.b' = 0$ if and only if $a.b = a$.
5.	State and prove Demorgan's law
6.	State and prove boundedness laws in Boolean algebra.
7.	State and prove idempotent laws.

8.	Prove that in a Boolean Algebra B, complement of every element is unique.
9.	Prove that every finite Boolean algebra is atomic.
10.	Prove the De Morgan's law $(a.b)' = a' + b', \forall\, a, b \in B$
